

Notes Section 6.1 – Functions and Systems of Equations in Two Variables

Lesson Objectives

1. Solve a linear equation graphically.
 - a. by hand
 - b. with graphing calculator
2. Determine if an ordered pair is a solution to a system of linear equations.
3. Solve a linear system of equations graphically.
4. Classify a system of equations:
 - a. consistent-independent (one solution)
 - b. consistent-dependent (infinite solutions)
 - c. inconsistent (no solutions)

A. Solve a Linear Equation Graphically

1. Solve $f(x) = c$ (c is some number)

- **EXAMPLE:** Use the graph of $y = f(x)$ shown to the right to solve each equation. [2.2.55]

(a) $f(x) = -1$

(b) $f(x) = 0$

(c) $f(x) = 2$

(a) $f(x) = -1$ means that $\underline{\hspace{1cm}} = -1$.

In the graph when $y = -1$, $x = \underline{\hspace{1cm}}$

That's the point: $(3, -1)$.

The solution to $f(x) = -1$ is $x = \underline{\hspace{1cm}}$.

(b) $f(x) = 0$ means that $\underline{\hspace{1cm}} = 0$.

In the graph when $y = 0$, $x = \underline{\hspace{1cm}}$

That's the point: $(4, 0)$.

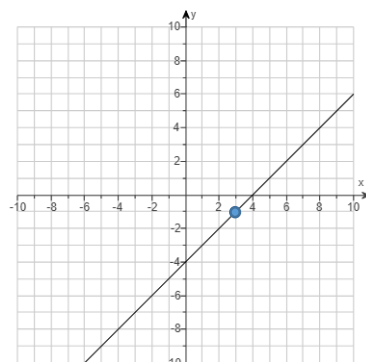

The solution to $f(x) = 0$ is $x = \underline{\hspace{1cm}}$.

(c) $f(x) = 2$ means that $\underline{\hspace{1cm}} = 2$.

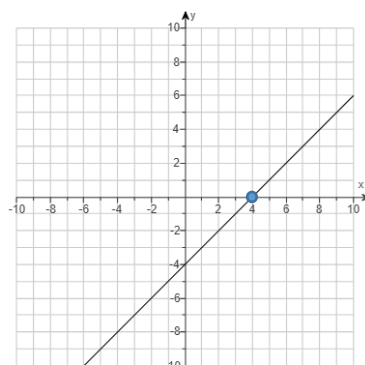

In the graph when $y = 2$, $x = \underline{\hspace{1cm}}$

That's the point: $(6, 2)$.

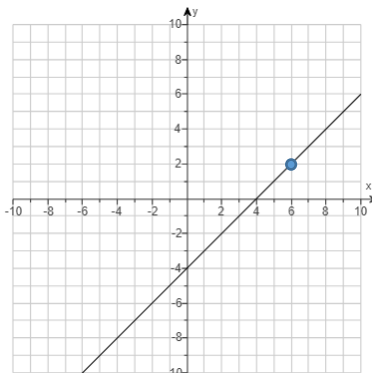

The solution to $f(x) = 0$ is $x = \underline{\hspace{1cm}}$.

(a)

(b)

(c)

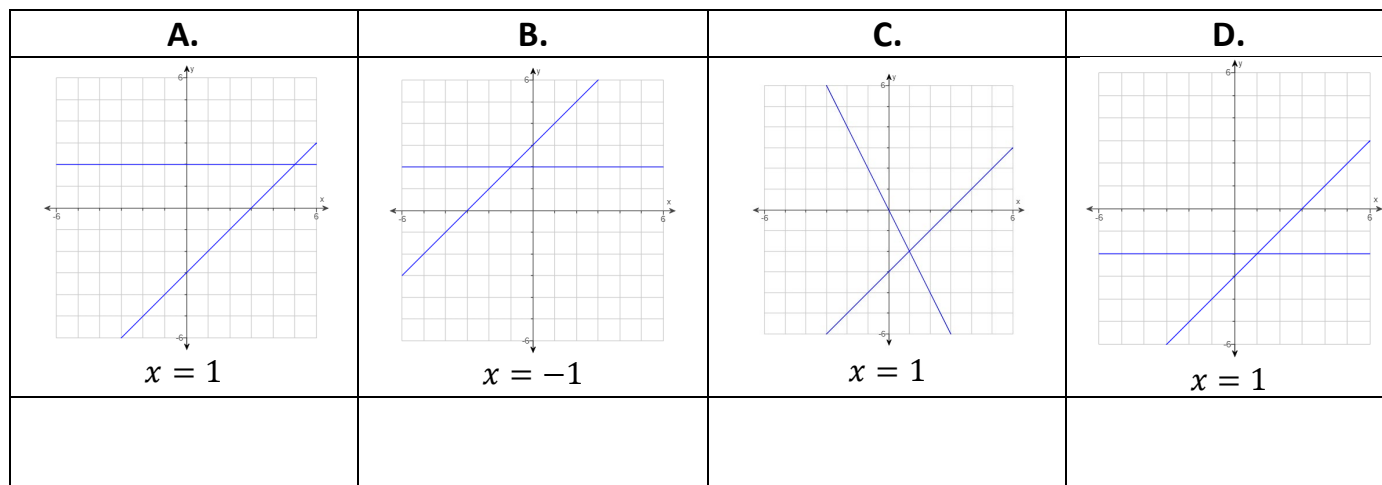

Notes Section 6.1 – Functions and Systems of Equations in Two Variables

2. Solve equation graphically

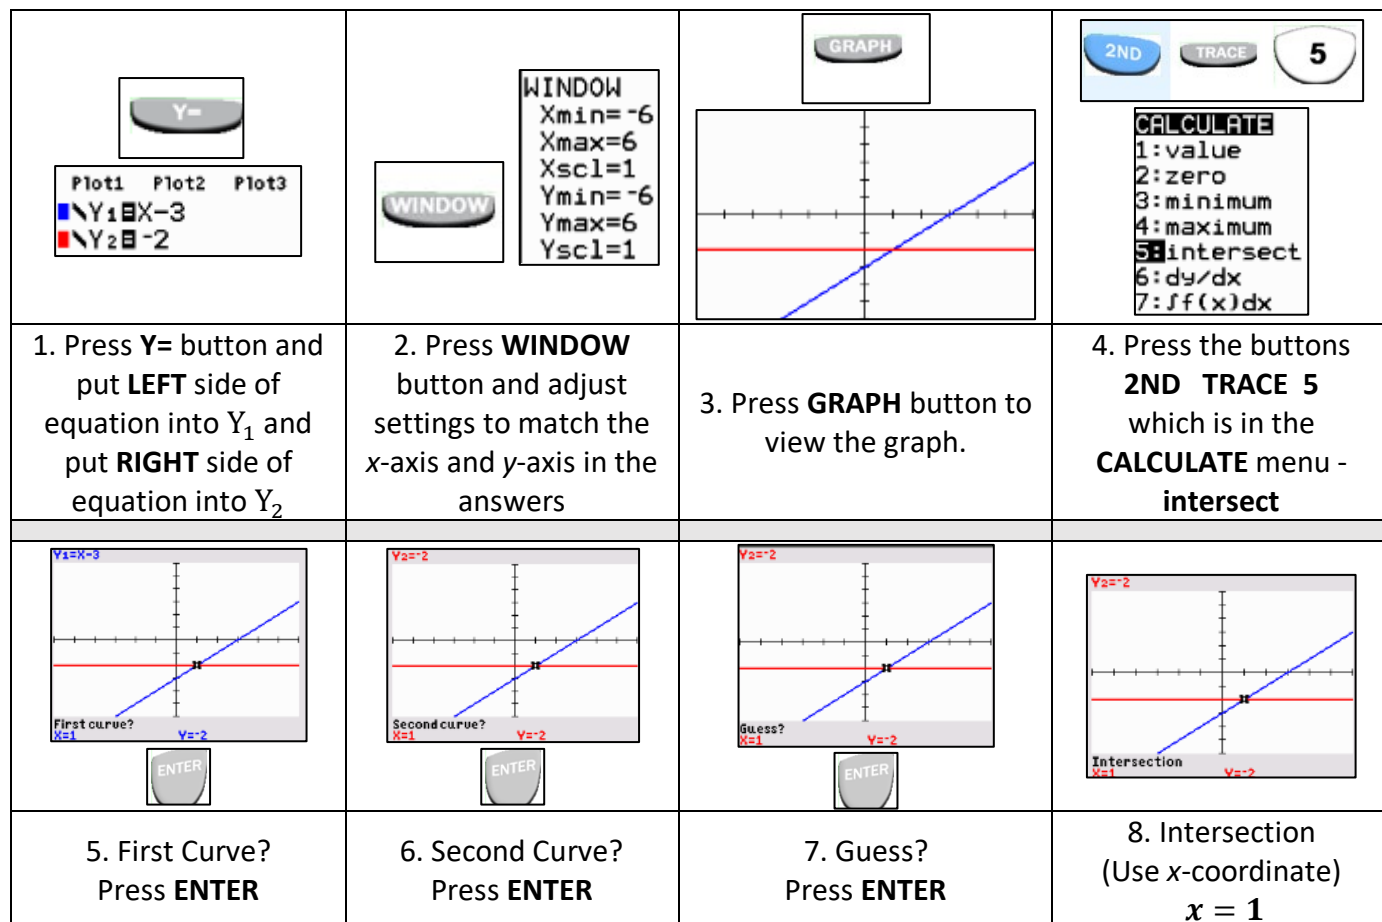

- EXAMPLE:** Let y_1 equal the left side and let y_2 equal the right side of the given equation. Graph y_1 and y_2 and use the graph to solve the equation $x - 3 = -2$ [2.2-19]

$$y_1 = \underline{\hspace{2cm}} \text{ y-intercept: } (0, \underline{\hspace{1cm}}), \text{ slope } m = \underline{\hspace{1cm}} \left(\frac{\text{rise}}{\text{run}} = \underline{\hspace{1cm}} \right)$$

$$y_2 = \underline{\hspace{2cm}} \text{ y-intercept: } (0, \underline{\hspace{1cm}}), \text{ slope } m = \underline{\hspace{1cm}} \left(\underline{\hspace{2cm}} \text{ line through y-axis at } -2 \right)$$

You can also use the **GRAPHING CALCULATOR** to find the solution.

Notes Section 6.1 – Functions and Systems of Equations in Two Variables

B. Systems of Linear Equations

_____ of linear equations – involves two or more linear equations at the same time.

_____ to a linear system – values of the variables that make _____ the equations in the system _____

1. Determine if an ordered pair is a solution

- EXAMPLE:** Decide whether the ordered pair $(2, -5)$ is a solution to the given system.

$$\begin{cases} 2x + y = 9 \\ 3x + 2y = 16 \end{cases} \quad [6.1-15]$$

Given $(2, -5)$ means $(x = 2, y = -5)$. _____ these into each equation:

$$\begin{cases} 2(\underline{\quad}) + (\underline{\quad}) \stackrel{?}{=} 9 \\ 3(\underline{\quad}) + 2(\underline{\quad}) \stackrel{?}{=} 16 \end{cases} \rightarrow \begin{cases} \underline{\quad} + (-5) \stackrel{?}{=} 9 \\ \underline{\quad} + (-10) \stackrel{?}{=} 16 \end{cases} \rightarrow \begin{cases} -1 \stackrel{?}{=} 9 \quad \underline{\quad} \\ -4 \stackrel{?}{=} 16 \quad \underline{\quad} \end{cases}$$

Conclusion:

 $(2, -5)$
 a solution

NOTE: You must get YES for _____ equation in the system for the point to be a solution!

You can also use the _____ method on the graphing calculator.

- EXAMPLE:** Decide whether the ordered pair $(2, -5)$ is a solution to the given system.

$$\begin{cases} 2x + y = 9 \\ 3x + 2y = 16 \end{cases} \quad (2, -5) \text{ means } (x = 2, y = -5)$$

 <div style="border: 1px solid black; padding: 2px;"> 2->X -5->Y </div>	 <div style="border: 1px solid black; padding: 2px;"> 2X+Y -1 </div>	 <div style="border: 1px solid black; padding: 2px;"> 3X+2Y -4 </div>	<p>Conclusion:</p> <p><u> </u></p> <p>$(2, -5)$</p> <p><u> </u></p> <p>a solution to the system</p> <p>$\begin{cases} 2x + y = 9 \\ 3x + 2y = 16 \end{cases}$</p>
<p>1. _____ your variables:</p> <p>Press 2 STO> X,T,θ,n ENTER</p> <p>then press -5 STO> ALPHA 1 ENTER</p>	<p>2. Test _____ equation:</p> <p>Type in 2X + Y then press ENTER</p> <p>Supposed to get _____ But actually got -1 (NO)</p>	<p>3. Test _____ equation:</p> <p>Type in 3X + 2Y Then press ENTER</p> <p>Supposed to get _____ But actually got -4 (NO)</p>	

Notes Section 6.1 – Functions and Systems of Equations in Two Variables

2. Solve a System of Linear Equations Graphically

- **EXAMPLE:** Use the graph of the system to determine the solution.

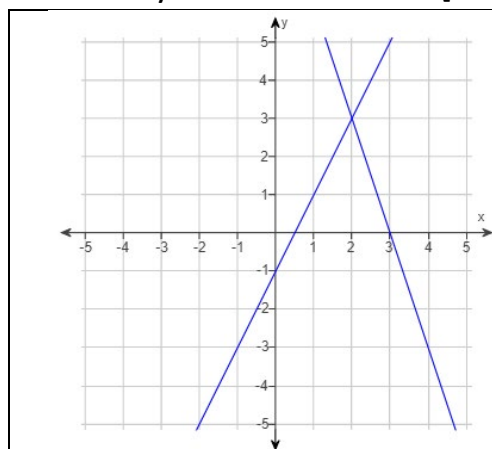

$$\begin{cases} x + y = 4 \\ x + 5y = 0 \end{cases}$$

[6.1.25]

The **solution** to the system is where the lines :

- **EXAMPLE:** A system of two linear equations has been solved graphically. Use the graph to find any solutions. [6.1-17]

A. There is an infinite number of solutions.

B. (3,2)

C. (2,3)

D. There are no solutions.

3. Three Types of Linear Systems

Types of Linear Systems with Two Variables

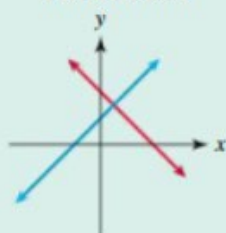

Consistent system:

Has either one solution (independent equations) or infinitely many solutions (dependent equations)

Inconsistent system:

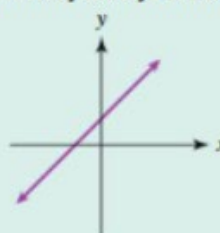

Has no solutions

One Solution

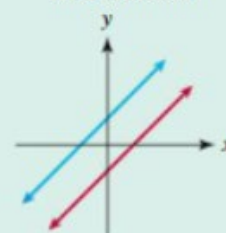

*Consistent System
Independent Equations*

Infinitely Many Solutions

*Consistent System
Dependent Equations*

No Solutions

Inconsistent System

Notes Section 6.1 – Functions and Systems of Equations in Two Variables

- EXAMPLE:** Graph the system of equations and find any solutions. Check the answers. Identify the system as consistent or inconsistent. If the system is consistent, state whether the equations are dependent or independent. [6.1.35-Setup & Solve]

$$\begin{cases} 4x + y = 8 \\ -4x - y = 16 \end{cases}$$

Solve each equation for **y** so that you can graph.
(show your work below)

$$4x + \mathbf{y} = 8$$

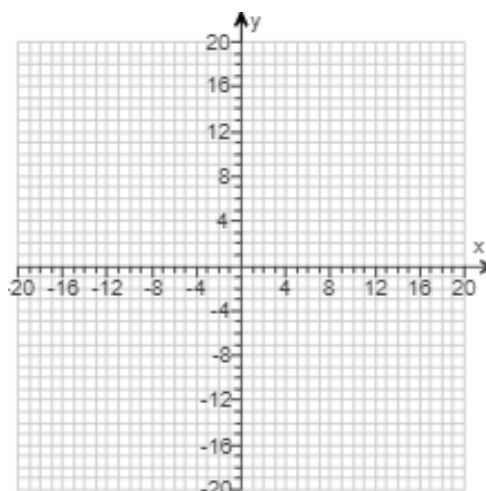

$$-4x - \mathbf{y} = 16$$

$$\mathbf{y} =$$

$$\mathbf{y} =$$

Use the graphing tool to graph the system.

Equation	y-intercept	Slope	$\frac{\text{rise}}{\text{run}}$
$y_1 = -4x + 8$	(0, <u> </u>)	<u> </u>	
$y_2 = -4x - 16$	(0, <u> </u>)	<u> </u>	

What is the solution of the system?
There is .

Identify the system as consistent or inconsistent. If the system is consistent, state whether the equations are dependent or independent.

The system is: .

Once you have your equations in slope-intercept form ($y = mx + b$), you can also verify you have the correct lines using your graphing calculator – assuming you made no errors.

<p>1. Press Y= button and enter your 2 equations you got into slope-intercept form.</p>	<p>2. Press WINDOW button and adjust settings to match x-axis and y-axis in the answer graph.</p>	<p>3. Press GRAPH button and this graph should match the one with the graphing tool. The lines are parallel and do not intersect; therefore, the system is INCONSISTENT and has NO SOLUTION.</p>

Notes Section 6.1 – Functions and Systems of Equations in Two Variables

- EXAMPLE:** Graph the system of equations and find any solutions. Check the answers. Identify the system as consistent or inconsistent. If the system is consistent, state whether the equations are dependent or independent. [6.1.39]

$$\begin{cases} x - 2y = -6 \\ -2x + y = 6 \end{cases}$$

Solve each equation for **y** so that you can graph.
(show your work below)

$$1x - 2y = -6$$

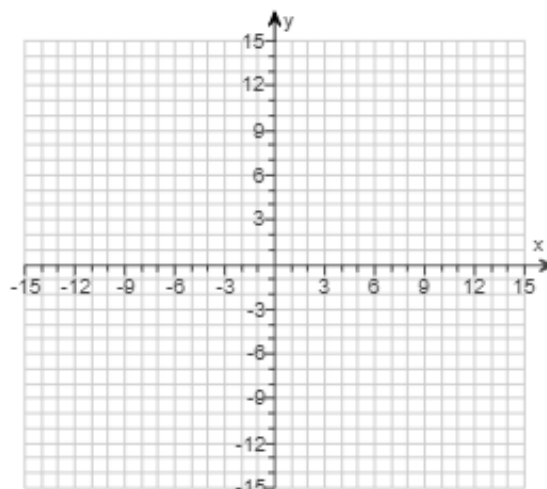

$$-2x + y = 6$$

$$y =$$

$$y =$$

Use the graphing tool to graph the system.

Equation	y-intercept	Slope	$\frac{\text{rise}}{\text{run}}$
$y_1 = \frac{1}{2}x + 3$	(0, <u> </u>)	<u> </u>	
$y_2 = 2x + 6$	(0, <u> </u>)	<u> </u>	

What is the solution of the system?
(Type an ordered pair.)

The solution is

Identify the system as consistent or inconsistent. If the system is consistent, state whether the equations are dependent or independent.

The system is: and
the equations are .

Once you have your equations in slope-intercept form ($y = mx + b$), you can also verify you have the correct lines using your graphing calculator – assuming you made no errors.

<p>1. Press Y= button and enter your 2 equations you got into slope-intercept form.</p>	<p>2. Press WINDOW button and adjust settings to match x-axis and y-axis in the answer graph.</p>	<p>3. Press GRAPH button and this graph should match the one with the graphing tool.</p>

Notes Section 6.1 – Functions and Systems of Equations in Two Variables

(problem continued from previous page)

<p>1. Press Y= button and enter your 2 equations you got into slope-intercept form.</p>	<p>2. Press WINDOW button and adjust settings to match x-axis and y-axis in the answer graph.</p>	<p>3. Press GRAPH button and this graph should match the one with the graphing tool.</p>	<p>4. Press the buttons 2ND TRACE 5 which is in the CALCULATE menu - intersect</p>
<p>5. First Curve? Press ENTER</p>	<p>6. Second Curve? Press ENTER</p>	<p>7. Guess? Press ENTER</p>	<p>8. Intersection (Use BOTH x and y) $x = -2$ and $y = 2$ (-2, 2) The lines TOUCH at exactly ONE point, so the system is CONSISTENT and INDEPENDENT.</p>

- EXAMPLE:** Solve the system of equations by graphing. Then classify the system.

$$\begin{cases} x + y = 2 \\ 8x + 8y = 16 \end{cases} \quad [6.1.41]$$

Solve each equation for **y** so that you can graph.
(show your work below)

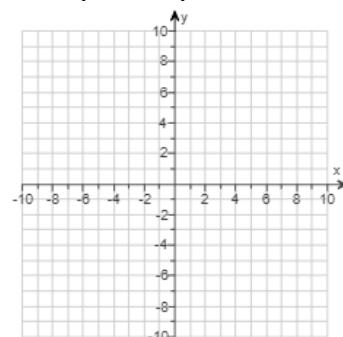

$$x + y = 2$$

$$8x + 8y = 16$$

$$y =$$

$$y =$$

These equations are the _____ line! Since they **TOUCH** on top of each other, it's _____ and _____.

y-intercept	Slope	rise run
(0, _____)	_____	

There are _____ solutions.
